Molly Mutt Europe · Meta Ads

Molly Mutt Europe sells dog bed covers that owners fill with their own old textiles. I planned a €300 Meta Ads test to learn which message brings eco-minded dog owners in Germany to the website.

MY ROLE
Ad set setup, campaign structure, video test

TEAM
Group of three, course project

TOOLS
Meta Ads Manager, Canva

STATUS

In 2 tests: video and carousel

63.8k–75k
People in the one audience, Germany

01 · THE BRAND

A dog bed you stuff with your own textiles

Molly Mutt Europe sells dog bed covers. The owner fills the cover with old pillows, clothes and blankets. The brand sells through mollymutt.eu and marketplaces.

One person runs the business. Paid ads have a budget of €300.

PILLAR 1

Upcycling

Owners fill the cover with textiles they already own. The bed smells like the owner, and nothing new goes into it.

PILLAR 2

Material safety

GOTS and Oeko-Tex certified. Non-toxic. The brand backs its green claims with certificates.

CAMPAIGN IDEA

Give your old pillows and clothes a second life with Molly Mutt.

02 · GOAL AND STRATEGY

One goal: bring the right people to the site

The upcycling idea needs a page to explain it. The campaign sends eco-minded dog owners in Germany from Meta to mollymutt.eu.

The campaign objective is Traffic. Cost per click (CPC) is the primary KPI. Click-through rate (CTR) checks that people react to the ads.

CPC TARGET

€0.45–0.60

Primary KPI

CLICKS

500–665

CTR

Above 2%

Secondary health check

TRACKING

UTM tags

Send each click into Google Analytics. Reach and impressions are context only.

03 · AUDIENCE

The eco-minded dog owner in Germany

Who they are

- All genders, 25–55 years old
- Lives in Germany
- Owns a dog
- Lives sustainably: recycles, buys organic, avoids fast fashion
- Shops online

What drives them

- Products that match their values, including for their pet
- Real certifications like GOTS and Oeko-Tex over marketing language
- The upcycling idea

What frustrates them

- Brands that claim “eco-friendly” with nothing to back it up
- Guessing whether a claim is real
- Sustainable pet products that look cheap or ugly

Why Germany?

The largest priority market for the brand.

It fits the brand's positioning built on certifications.

A Zooplus Germany listing gives paid social a retail page to support.

04 · AD SET SETUP

From 20 million people to 63,800–75,000

I used an Advantage+ audience. Meta treats my targeting as a suggestion and may reach further when that improves results.

1 **Location**

Germany.

2 **Age and gender**

25 to 55, all genders.

3 **Purchase behavior**

Engaged Shoppers

People who buy online.

4 **Interests**

Dog grooming · Dog lovers · Dog park · Dog training · Dog walking · Dog toy

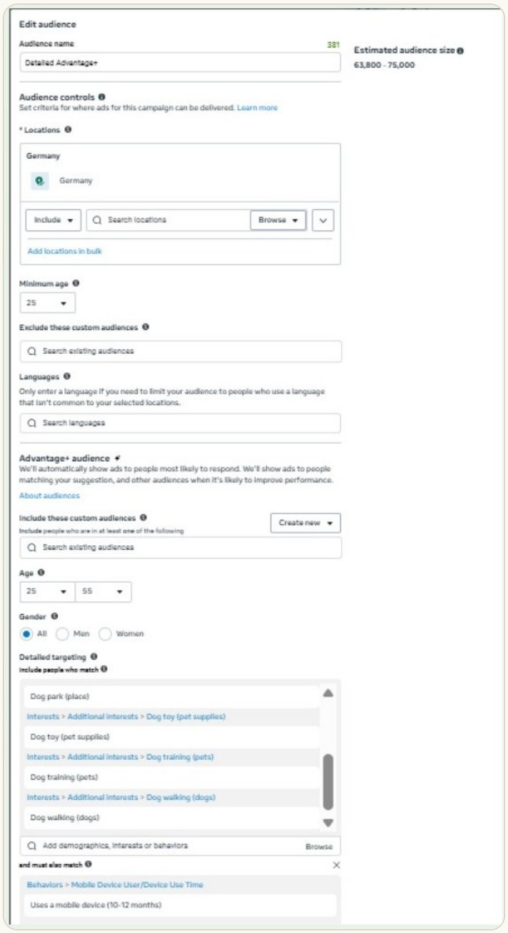

5 **Check the size**

The audience still counted about 20 million people. The course rule of thumb says 50,000 to 400,000 people for a daily budget of €30–40. A wider audience spreads the budget over people who will not click.

6 **Narrow the audience**

Must also match: uses a mobile device (10–12 months)

This cut the audience to 63,800–75,000, inside the range.

Audience settings in Meta Ads Manager, retrieved 24.09.2026.

WHY MOBILE USERS?

The ads run where people hold a phone

Facebook and Instagram get used mostly on phones. Stories and Reels are phone formats. Narrowing to active mobile users shrinks the audience and keeps the ads with people who see them in the format they were made for.

PLACEMENTS

Where the ads run

Facebook

Skews older and often costs less to reach.

Instagram

Design-conscious, eco-minded people stop and look.

Feed Stories Reels

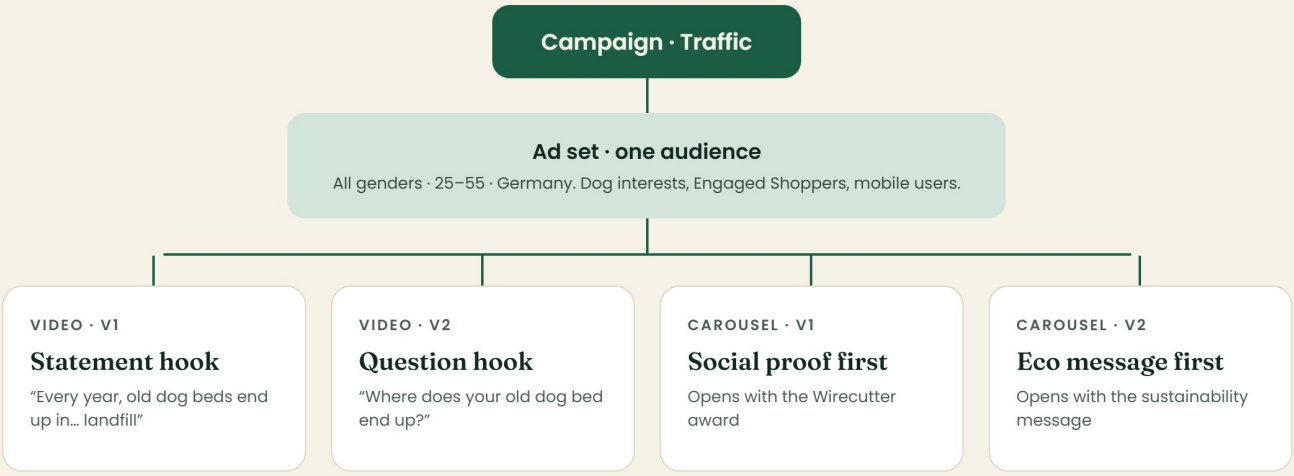

Feed Stories Reels

Video fits Stories and Reels. The carousel fits Feed, where people swipe. The utm_medium tag records the placement of each click, so I can compare them after the campaign.

05 · CAMPAIGN STRUCTURE

One campaign, one audience, four ads

All four ads reach the same audience. When two ads perform differently, the ad explains the gap, not the audience.

Two tests run side by side. The video test changes the first caption. The carousel test changes the first slide. Each test changes one thing.

06 · TEST 1: VIDEO

Which opening line stops the scroll?

STEP 1 · CHOOSE THE FORMAT

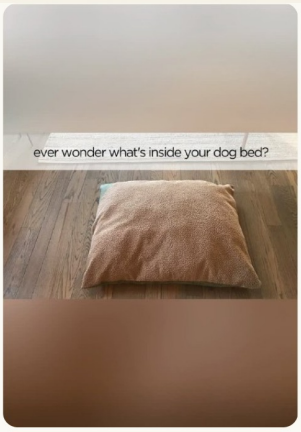

Video or static image?

Molly Mutt already owned both assets on the right. Before I edited either, I asked which format explains the idea better.

HYPOTHESIS

If we use a video instead of a static image, we expect higher engagement and CTR, because motion shows old clothes becoming a bed.

The static image does not run as an ad. This hypothesis picks the format. The live test compares two video hooks.

Original video
Molly Mutt asset, unedited

Original static post
Molly Mutt asset, unedited

STEP 2 · ADAPT THE VIDEO

From the original clip to a recycling ad

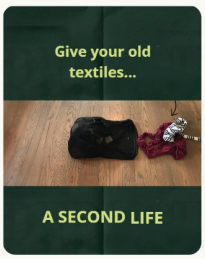

I edited Molly Mutt's original video with video editing tools. I added no AI-generated footage. The ad runs 26 seconds.

1 · Hook
Landfill statement

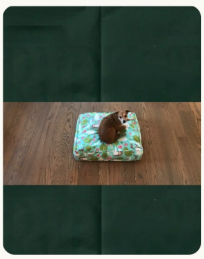

2 · Problem
Foam and polyfil don't break down

3 · Reuse
Old textiles get a second life

4 · Product
Washable cotton canvas

5 · Result
Dog on the finished bed

6 · End card
Reduce. Reuse. Re-stuff.

FORMAT
Resized from 16:9 to 4:5 (1440 × 1800 px)

LENGTH
Cut from 31 to 26 seconds

MESSAGE
New frames and captions for the landfill and carbon angle

SOUND
"Favorite Pets" by Villatic Music, Canva free licence

STEP 3 · BUILD TWO VERSIONS

Same video, two opening lines

Only the first caption changes. The footage, pacing and end card stay identical.

V1 · Statement hook
"Every year, old dog beds end up in... landfill"

V2 · Question hook
"Where does your old dog bed end up?"

HYPOTHESIS

If the video opens with a question instead of a statement, more people click, because a question leaves a gap the viewer wants to close.

WHERE IT SENDS PEOPLE

www.mollymutt.eu. Each version carries its own utm_content tag: video_statementhook_v1 and video_questionhook_v2.

07 · TEST 2: CAROUSEL

Which first slide earns the swipe?

STEP 1 · CHOOSE THE FORMAT

Carousel or static image?

Both assets on the right belong to Molly Mutt and carry the eco angle. The carousel adds outside proof from the Wirecutter award.

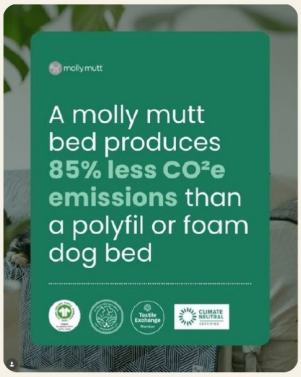

HYPOTHESIS

If we use the Wirecutter carousel instead of the static image, we expect higher engagement and CTR, because The New York Times' testing team gives outside proof, and swiping keeps people on the ad longer.

The static image does not run as an ad. This hypothesis picks the carousel as the format.

Original carousel, first card

Original static post
Molly Mutt asset, unedited

STEP 2 · BUILD TWO VERSIONS

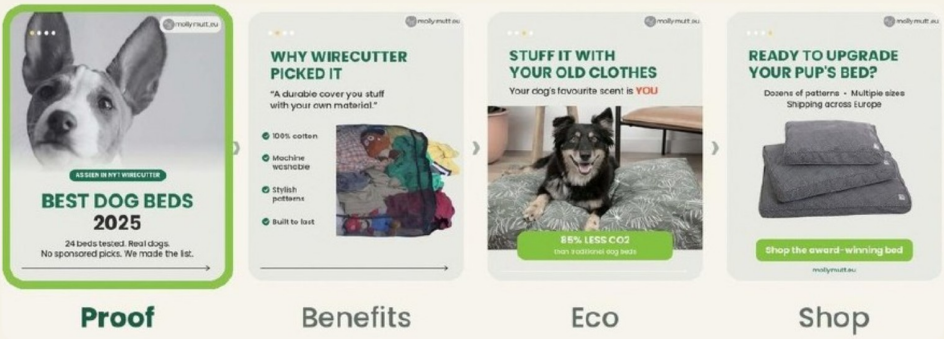

Same four slides, a different first impression

Both versions make the same claims in the same text. V1 opens with the award. V2 opens with the sustainability message.

V1

Starts with trust

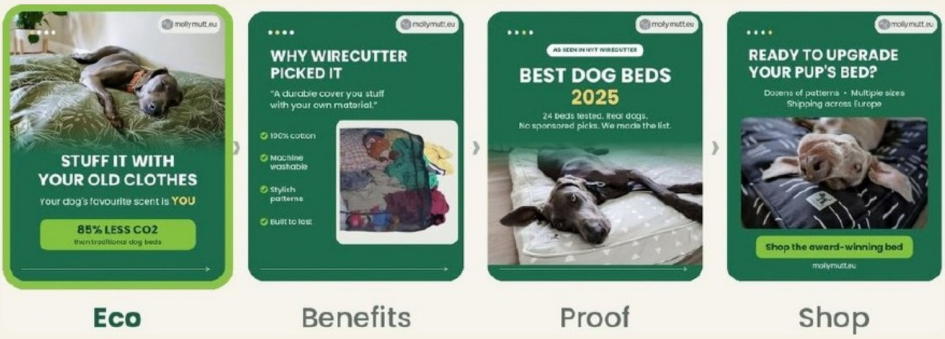

Proof, Benefits, Eco, Shop

V2

Starts with sustainability

Eco, Benefits, Proof, Shop

HYPOTHESIS

If the carousel opens with the sustainability message instead of the award, more people click, because the audience already cares about sustainability.

WHERE IT SENDS PEOPLE

de.mollymutt.eu build-your-bed page and the climate neutral certified page. Each version carries its own utm_content tag.

08 · AD COPY

Five options per field, mixed by Meta

Dynamic Creative mixes up to five primary texts, headlines and descriptions, then serves the best mix. Primary text carries the hook in about 125 characters before “See more”. The headline runs about 40 characters. The description runs about 30.

PRIMARY TEXT

01

Give your old pillows and clothes a second life. Turn them into a cozy bed your dog will love.

02

Why throw away old pillows when your dog could sleep on them. Reuse, re-stuff and create a cozy place to rest.

03

A cozy bed for your dog, with less waste. Reuse the soft things you already have and give them a new purpose.

04

05

Old pillows. Old clothes. New favorite sleeping spot. Give what you already have a second life.

Comfort for your dog. Less waste for the planet. A simple way to reduce, reuse and re-stuff.

HEADLINES

1. Give Old Pillows a New Life
2. Reduce. Reuse. Re-Stuff.
3. A Cozy Bed, Less Waste
4. Turn Old Clothes Into Comfort
5. One Cozy Dog Bed Forever

DESCRIPTIONS

1. Reuse what you already have
2. A smarter way to rest
3. Made for cozy dogs
4. Give old things new purpose
5. Comfort with less waste

09 · STRATEGIC DECISIONS

Why I made these choices

Traffic as the objective	The idea needs a page to explain it. Molly Mutt also has no Meta Pixel, so Meta cannot track other events on the site. Clicks are the metric available.
Germany, ages 25–55	Germany is the largest priority market. The age range matches the persona and the brand's positioning built on certifications.
Advantage+ audience, narrowed to mobile users	The filter cut 20 million people to 63,800–75,000, inside the 50,000–400,000 rule of thumb. It also fits phone formats like Stories and Reels.
One audience for all four ads	The ad becomes the only difference between two results.
Video and carousel	Video shows the upcycling idea in motion. The carousel carries proof: an award, certifications and a carbon figure. The persona wants both.
One change per test	A single change shows what caused a result. The video changes its first caption. The carousel changes its first slide.
Molly Mutt's own assets as the base	One person runs the business. Adapting existing footage and photos costs time, not production budget.

10 · WHAT I EXPECT TO LEARN

Two questions, four possible answers

VIDEO TEST

Does a question stop the scroll better than a statement?

Question wins: I open future videos with a question.
Statement wins: I state the problem first.

CAROUSEL TEST

Does sustainability beat an award as the first slide?

Eco first wins: I lead with the sustainability message.
Proof first wins: I lead with the award.

How I will read the results

- Run the full 14 days. The first days are unstable while Meta learns.
- Rank the ads in each test on CPC first, then CTR. Targets: CPC €0.45–0.60, CTR above 2%.
- Check that the gap is larger than chance before naming a winner.
- Follow the UTM tags into Google Analytics to see what visitors do after the click.

Limits of the design

- 500–665 clicks across four ads leave about 125–165 clicks per ad. Small gaps may be noise.
- Carousel V2 changes colour and photos as well as slide order.

RESULTS

[Add after Oct 18, 2026: CPC, CTR and clicks per ad. The winner of each test. One lesson.]

All images and video belong to Molly Mutt Europe. I adapted them for this course project. No AI-generated assets.

Group project. Team: Qi, Trang, Luis.
